

SMART3R

with catalytic sensor

SMART3R is developed to detect different gases in non classified areas, as machinery rooms and laboratories. A pellistor sensor is used to detect flammable gases, in order to get an optimal accuracy and selectivity. 4 smart LEDs illuminate the transparent ring to describe the detector status and an internal buzzer is activated in alarm and fault conditions. The SMART3R LITE gas detector has a standard 12-24 Vdc power supply, but a 220 Vac version can be supplied. The gas detector has three relay outputs, an RS485 serial communication and an analogue 4-20 mA output (not in 220 Vac version). The polycarbonate case has a global size of 130 x 130 x 74 mm. The box has 2 entries with M20 cable glands. On the sides there are pre-formed guides that can be drilled to add up to 6 M16 cable glands. The gas detector can be equipped with a remote head connected with a RJ12 6P6C cable.
